Offering a therapeutic environment for detoxification services

rosecrance
life's waiting®

Health Center

The Health Center, located at the Harrison Campus, is designed to consolidate detoxification and medical services under one division to better serve our patients.

Evaluate. Physicians, nurses, unit technicians and behavioral health counselors work together with the client to ensure that physical and medical concerns are addressed.

Stabilize. The Health Center is the access point to the 24-bed, medically monitored, detoxification unit that provides clients with a safe, therapeutic environment where they can withdraw from alcohol and/or other drugs.

Link. In conjunction with their stay at the Health Center, clients are introduced to treatment options and are encouraged to explore which program will provide them with the best opportunity for lasting recovery.

Services

- 24-hour admissions to detoxification
- Patient Access Counselors (PAC) who provide assessments, discharge planning and referrals for every individual
- A therapeutic environment to withdraw from the drug(s) and prepare for the next treatment step
- Access to the Medically Assisted Recovery Clinic (MARC), which offers an alternative, evidence-based treatment method for addicted individuals

Admission criteria

- The client presents voluntarily.
- The client is oriented to person, place and time.
- The client must be medically stable.

- The client meets DSM-IV-TR criteria for Psychoactive Substance Dependence and is experiencing withdrawal symptoms, or there is a reasonable likelihood that he/she soon will experience withdrawal symptoms.

Advantages of inpatient subacute detoxification

- The client is in a protected setting where access to substances of abuse is restricted.
- Detoxification can be accomplished more rapidly than in an outpatient setting using the safest, most comfortable methods currently available.
- Subacute inpatient detoxification is more cost effective in comparison to acute hospital inpatient detoxification.
- Successful completion of detoxification is far more likely to occur, and the client is introduced to treatment options that can lead to lasting recovery.
